CREMATION PROCESS

Statutory definition pursuant to Health and Safety Code 7054.7(b): The human body burns with the casket, container, or other material in the cremation chamber. Some bone fragments are not combustible at the incineration temperature and, as a result, remain in the cremation chamber. During the cremation, the contents of the chamber may be moved to facilitate incineration. The chamber is composed of ceramic or other material, which disintegrates slightly during each cremation, and the product of that disintegration is commingled with the cremated remains. Nearly all of the contents of the cremation chamber, consisting of the cremated remains, disintegrated chamber material, and small amount of residue from previous cremations, are removed together and crushed, pulverized, or ground to facilitate inurnment or scattering. Some residue remains in the cracks and uneven places of the chamber. Periodically, the accumulation of this residue is removed and interred in a dedicated cemetery property, or scattered at sea.

WITNESSED CREMATIONS

The crematory permits witness cremations by appointment only. It is assumed that the Authorizing Agent does not request a witness cremation of the herein named decedent. If a witness cremation is desired, the Authorizing Agent will arrange scheduling and participants through the Funeral Establishment.

The Crematory is authorized to remove and dispose of handles, ornaments, and any other noncombustible items attached to the cremation container prior to cremation.

In the event the cremated remains container selected is insufficient to accommodate all of the cremated remains, the excess will be placed in a separate cremated remains container, which will be secured to the primary cremated remains container unless the Authorizing Agent has requested splitting of the cremated remains for multiple dispositions.
